ERRATA.

Page 41. Barometer, 10 p.m., 6th. For "26·790", read "29·790".

„ 104. Rainfall, Note. For "†", read "*".

„ 110. Rainfall, Note, "*and ice*," should be in ordinary type.

„ 147. Rainfall, Total, 28th. Should be "·134".

„ 294. Dry-bulb, 1 a.m., 1st. For "*4·56*", read "*45·6*".

ADDITIONAL ERRATUM IN THE VOLUME FOR 1881.

Page 394. Barometer, 6 a.m., 14th. For "28·319", read "28·331".

2145/2

PREFACE.

The present volume of the Hourly Readings appears in a slightly different form from that for 1881. With the year 1880 the publication of the Quarterly Weather Report, which was commenced in 1869, will cease. Accordingly the tables of the Monthly and Yearly Results from the seven Self-recording Observatories, which have hitherto appeared in that publication, will henceforward be issued with the Hourly Readings. As the volume of these Readings for 1881 has already appeared without any such tables, those for that year will be found at page xi. of the present work.

It should be remarked that in the preparation of these tables the methods followed have been those previously in use. Thus, for instance, the Monthly Vapour Tension has been obtained from the means of the dry-bulb and wet-bulb thermometers, and not from the hourly values, the differences between the results by the two methods being, however, but slight. The barometer readings have in all cases been reduced to 32° Fahrenheit, but no correction has been applied for the height of the Station above the Sea. The corrections required to reduce the readings to Mean Sea Level will be found on page 3.

The Monthly Rainfall, which appears in the tables for the first time, is the sum of the daily amounts (as measured each morning at about 10 a.m. and entered to the preceding day), and therefore will at times differ from the sum of the daily totals shown in the following pages. These have been taken in order that the results may be more readily compared with those from other stations.

ROBERT H. SCOTT.

NOTE.—Means which are enclosed in brackets are a little doubtful, one of the daily means being approximate.

* Two of the daily means are approximate.

† Three of the daily means are approximate.

HOURLY READINGS, 1882.

INTRODUCTORY REMARKS.

THE following Tables give for each of the Seven British Self-recording Observatories of the Meteorological Office, for each hour—

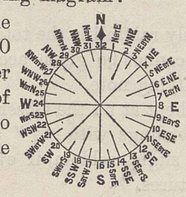
1. Readings of the barometer reduced to 32° Fahrenheit.
2. Readings of the dry-bulb and wet-bulb thermometers.
3. Direction and velocity of the wind.
4. Rainfall.
5. Vapour tension, or proportion of vapour in the air. Also
6. Daily minima, maxima, and range of pressure and temperature.
7. Daily means of the barometer and dry-bulb and wet-bulb thermometers; and
8. Daily total fall of rain.

1. *Pressure.*—The barometer readings are measurements of the photographic curves, at points two minutes after each hour. They are reduced to 32° Fahrenheit by a mechanical arrangement in the instrument itself, but no correction has been applied for the height of the stations above mean sea level.

The corrections required for the reduction of the readings to the mean sea level are given on page 3.

2. *Temperature.*—The thermometer readings are measurements of the photographic curves at points two minutes before each hour, corrected in each case for any instrumental errors. The heights of the bulbs above the ground vary from 4 feet at Armagh to 41 feet at Aberdeen, but no correction has been applied to the readings for this height above ground.

3. *Wind.*—The direction of the wind is that recorded exactly at the hour. It is given according to true bearings, in numbers corresponding to the various points of the compass, as shown by the following diagram:—



The velocity of the wind is the space travelled over from 30 minutes before to 30 minutes after the hour. Thus the number of miles recorded from 2.30 p.m. to 3.30 p.m. is set down as the velocity for 3 p.m. The factor 3 (Dr. Robinson's original factor) has been employed for converting the distance actually run by the cups into "space travelled over."

Corrections for the effect of friction have been applied as follows:—

When the tabulated velocity is 0 miles, correction is 1·5 miles.
„ „ „ 1—3 „ „ 1·0 „
„ „ „ 4—10 „ „ 0·5 „
„ „ „ above 10 „ „ 0·0 „

4. *Rainfall.*—The rainfall is the total precipitation for the 60 minutes ending at the hour. Thus the total fall registered in the interval from 1 p.m. to 2 p.m. is taken as the fall for 2 p.m. Occasionally in winter when snow falls, or when the rain freezes, the siphon fails to act, and no hourly falls can be given. In such cases the amount found in the gauge is measured at about 10 o'clock each morning, and the total fall is inserted in words, as, "Total for preceding 24 hours = ·056," &c. Occasionally also a small quantity of water is found in the rain-gauge in the morning, which, though believed to be rainfall, it is impossible to assign to any particular hour. In such a case the amount will be found entered at 10 a.m. with the note "Measured at 10 a.m." Where the amount found in the gauge is known to be dew, a note to that effect is inserted.

5. *Vapour Tension.*—This gives the proportion of the total atmospheric pressure which is due to the presence of vapour in the air, expressed in inches of mercury. It is obtained from the readings of the dry-bulb and wet-bulb thermometers by using Glaisher's Hygrometrical Tables, 5th edition, London, 1869. When from any cause the reading of either dry-bulb or wet-bulb thermometer is missing, if a pair of standard readings are available the latter have always been used in calculating the vapour tension.

6. *Minima and Maxima.*—The minimum and maximum temperatures are the values of the lowest and highest points respectively of the curves for the 24 hours ending at midnight. For the pressure, however, the lowest and highest *hourly readings* are taken, and, while in some cases these are not the true minima and maxima of the day, the differences are ordinarily but slight.

The daily range is, for both pressure and temperature, the difference between the daily minima and maxima.

7. *Means.*—The daily means of the barometer and thermometer readings are obtained by adding together the hourly readings for each day and dividing the sum by 24. These means are not carried further than to three places of decimals for the pressures, and to one place of decimals for the temperatures. When the final remainder is 12 the last figure is thrown up—thus, 29·7465 is entered as 29·747, 51·25 is entered as 51·3, and so on.

8. *Daily Rainfall.*—The total daily rainfall is the total precipitation for the 24 hours ending at midnight. Where this cannot be given accurately, owing to snowfall, &c., the amount is inserted with a qualifying note.

Time.—Greenwich mean time is kept at all the Observatories, not local time.

Approximate Readings.—Those readings with "†" are approximate only, but the limit of error may be taken to be slight, seldom, if ever, exceeding 0·01 inch in the pressures, and 1°·0 in the temperatures.

Interpolations.—Readings printed in italic type are interpolations which have been used in calculating the means. In some cases the gaps were too great to be bridged over by interpolation, and the spaces are consequently left blank. Means have, however, been calculated for such days, and they will be found entered with the note "probable mean."

Corrections to be applied to the Readings of the Photographic Barometer Curves to reduce them to Mean Sea Level. The readings have already been reduced to 32° Fahrenheit.

(The correction is additive.)

Note.—The corrections given above differ slightly from those found in a corresponding table printed in the Quarterly Weather Report for 1869, the reason being that the values on which the table is based were recalculated in 1875, and published in "Instructions in the Use of Meteorological Instruments," and that these new values have been employed here.
